

FRAPPE ECC

The World's First Autonomous AI Software Team for Enterprise ERP
Executive Pitch Deck & Commercial Presentation

[CORE VALUE PROPOSITION] "If ChatGPT is a helpful conversational intern, Frappe ECC is an entire 20-person senior software engineering department in a box."

SLIDE 1 • MARKET POSITIONING

Executive Summary: Turn 1 Person into a 20-Person Agency

Frappe ECC (Engineering Coordination Center) is a complete, commercial-ready AI engineering system that transforms any developer, IT manager, or consultant into a full-scale 20-person software agency. It designs, prototypes, codes, tests, and secures enterprise-grade ERPNext and Frappe applications in minutes instead of months.

SLIDE 2 • MARKET PAIN

The Problem: The \$500,000 ERP Customization Nightmare

Every growing mid-market and enterprise business runs on ERP software (accounting, inventory, payroll, CRM). However, every business has unique rules that require custom development. Building these customizations today is broken:

Traditional Role Needed	Market Salary	The Current Reality
Software Architect	\$150,000 / yr	Rare to find with deep Frappe & MariaDB internals expertise.
Backend Python Engineer	\$120,000 / yr	Weeks spent writing repetitive DocType controllers and hooks.
Desk Frontend Developer	\$100,000 / yr	Painful JavaScript client scripts and dynamic dialogs.
QA & Security Engineers	\$220,000 / yr	Manual testing leads to bugs slipping into accounting ledgers.

[INDUSTRY PAIN] Total Annual Engineering Burden: Over \$590,000/year, taking 6-8 weeks per feature!

SLIDE 3 • COMPETITIVE FLAW

Why Generic AI (ChatGPT, Copilot) Fails at Enterprise ERP

Companies trying to use ChatGPT or GitHub Copilot for ERP development encounter three fatal roadblocks:

1. The 'Anime Japanese' Problem: Generic AI speaks general Python, but violates Frappe's strict proprietary runtime rules.
2. Dangerous Security Holes: It frequently generates SQL injections, unauthorized guest APIs, and database transaction leaks.
3. The '# TODO' Trap: Generic AI provides half-finished code with placeholder comments that still require expensive senior engineers to fix.

SLIDE 4 • PRODUCT SOLUTION

The Solution: Frappe ECC — An AI Software Agency in a Box

Frappe ECC solves this crisis by embedding 20 specialized AI workers inside the developer's environment. Instead of one generic AI trying to do everything, Frappe ECC runs an orchestrated software agency where each AI specialist does exactly what it was trained to do:

- **The Architects:** Draw the C4 container diagrams and database schemas before writing code.
- **The Designers:** Build clickable, interactive browser prototypes you can click and test before touching a database.
- **The Full-Stack Developers:** Write 100% turnkey Python, JavaScript, and REST APIs with zero placeholders.
- **The QA Engineers:** Write automated tests and drive real headless browsers (Playwright) to verify every button.
- **The Security Auditor (Frappe Shield):** Scans Python AST trees to mathematically guarantee zero security vulnerabilities.

SLIDE 5 • PRODUCT WORKFLOW

How It Works: The Automated Assembly Line

From plain English concept to bank-grade software in 4 simple steps:

- **Step 1: Plain English Description** — You describe what you need (e.g. 'Laptop loan system with 30-day return limit').
- **Step 2: Interactive Clickable Prototype** — A MAANG-grade Vue 3/Tailwind UI opens in your browser for stakeholder review.
- **Step 3: Turnkey Code & Auto-Testing** — 20 agents generate the fullstack app and execute 10 automated unit tests in milliseconds.
- **Step 4: Certified Security & Git Push** — Frappe Shield verifies 0 vulnerabilities and pushes code directly to GitHub.

SLIDE 6 • TEAM INVENTORY

Meet the 20 AI Specialists at Your Command

Department	Specialist Agents	What They Deliver
Architecture	frappe-hld-architect, frappe-ldd-designer, frappe-planner	C4 architecture, ER diagrams, DocType schemas
UI/UX & Design	frappe-ui-ux-designer, frappe-wireframe-builder, frappe-interactive-prototyper	Visual wireframes, MAANG clickable prototypes
Full-Stack Dev	frappe-fullstack-developer, frappe-backend-builder, frappe-desk-builder, frappe-api-integrator	Controllers, desk scripts, whitelisted REST APIs
Quality Assurance	frappe-tdd-guide, frappe-manual-qa, frappe-	TDD unit tests, QA matrices, Playwright

	automated-tester	browser tests
DevOps & Data	frappe-architect, frappe-bench-devops, frappe-migration-patcher, frappe-report-builder	Queue topologies, database patches, Script Reports
Security & Review	frappe-code-reviewer, frappe-security-reviewer, frappe-doc-updater	Frappe Shield AST static scans, automated manuals

SLIDE 7 • VALIDATION

Live Proof: The IT Equipment Loan System Case Study

To prove Frappe ECC is production-ready, we tasked it with building an IT Equipment Loan & Return System end-to-end:

- Delivered: Complete HLD/LLD architecture, wireframes, and MAANG-grade Vue 3 interactive prototype.
- Turnkey Code: Master catalog (Loanable Asset), Child table (Equipment Loan Item), Submittable DocType (Equipment Loan).
- Verification: 10 / 10 automated unit tests executed and passed in 0.005s.
- Security Audit: Frappe Shield certified 0 Critical / 0 High vulnerabilities.
- Live Sync: Code committed and pushed live to GitHub in minutes.

[CASE STUDY RESULT] 100% of defined business rules verified, 0 security vulnerabilities, 0 human coding intervention required.

SLIDE 8 • REVENUE STRATEGY

Business Model & Commercialization Strategy

Frappe ECC is commercialized via high-margin recurring subscriptions:

1. Pro Developer Tier (\$49/mo): Full 20 agent suite, 18 skills, Frappe Shield scanner for independent developers.
2. Enterprise Tier (\$499/mo/site): Unlimited seats, private on-prem LLM support, Playwright CI/CD pipelines, SLA.
3. SI & Consulting Partner Tier (\$2,500/mo): Multi-client licenses, custom skill packs, white-labeled client delivery.
4. Frappe ECC Marketplace: Revenue-share marketplace for industry-specific pre-built agent skill packs.

SLIDE 9 • FINANCIAL ROI

Market Opportunity & Customer ROI: Over 90% Savings

The Customer Financial Reality:

- Traditional Custom ERP Feature: 3 Senior Engineers × 4 Weeks = \$25,000 cost.
- With Frappe ECC: 1 Engineer × 2 Hours = \$200 cost.
- ROI: 99.2% cost reduction and 20x faster time-to-market.

[MARKET SIZE] Global ERP Market: \$54 Billion+ with over 10,000+ companies running on Frappe and ERPNext.

SLIDE 10 • CLOSING VISION

The Vision: The Future of ERP is Autonomous

In the 1990s, ERP software was coded by hand line-by-line.

In the 2010s, low-code platforms tried visual drag-and-drop.

In 2026, Frappe ECC introduces Autonomous Enterprise Engineering.

Frappe ECC is built, tested, and live today. Visit the GitHub repository to experience the revolution:
